Unified control for maximum security.

TruVision® Navigator brings it all together.

Intuitive and powerful, TruVision Navigator combines Interlogix commercial offerings—video, access control, intrusion and networking—into a unified security solution. Ideal for small- to mid-size applications, TruVision Navigator provides powerful centralized and remote management capabilities. It's an ideal way to manage the entire Interlogix-based security system, easily and effectively.

See how at interlogix.com/navigator.

NEW SERVICES!

New Course Delivery Method! Online Instructor Led Training (OILT) courses allow you to get the full benefit of a live instructor teaching a course without the travel time or expense. You can interact with the instructor and ask questions all from the comfort of your home or office! To check offerings in your area visit your local Chapter website or **visit courses.esaweb.org**.

THE ADVANTAGES OF VIRTUAL CLASSROOM TRAINING:

Interact & Engage

Through high-quality video of all participants and instructor

Watch Live

Training presentation slides and take practice quizzes/exams

Learn

And hone your craft from your own personal workspace

More options for taking a proctored exam! In many states we can offer web based proctoring services. This means you can take the proctored exam from your home or office rather than going to a third-party testing center. For details on where web-based proctoring is available contact us at nts@esaweb.org

New Tool to Help with Hiring! If you are hiring a new technician we have comprehensive tests that will give you insights on your new hires security, fire, video and access control installation skills. At the completion of these online

tests, we will provide you with an outcome report that will give you insight into their strengths and weaknesses so that you can better guide them on a training path.

E-Books for Manuals! Take your course manuals with you on the go using the new E-books option available for most NTS courses. We will continue to provide you a physical manual, but now we will also give you the ability to download an E-book version so that you can easily look up information from your phone or tablet.

redefine reinvent renew

Introducing Resideo... the new home for Honeywell Home.

Together, we're bringing even more innovation to the heart of the home. More responsive, more comfortable, more secure. A renewed focus, with the same Honeywell Home reliability.

REVISED OR NEW COURSES

Texas 18 Hour Alarm Level 1 – This online course is specifically designed for those needing to meet the Texas Department of Public Safety - Private Security Bureau's administrative code §35.161. By the end of this course, you will understand the theory, installation and maintenance of alarm systems.

Certified Alarm Technician Level I - Modules have been updated to include the latest technology evolutions and hands-on exercises. These exercises provide practical experience building circuits and placing interior sensors.

Florida 14 hour Contractor CEU course – Custom course that will provide the necessary CEUs for Florida licensed contractors to renew their license.

The Education Committee and Subject Matter Task Forces are currently updating or creating the following courses in 2019.

Electronic Access Control – a full review and update of the course is being done to better match today's technologies, codes and standards.

Advanced Intrusion Systems – a full review and update of the course is being done to better match today's technologies, codes and standards.

Montana 16 hour Alarm Installation – this new online course is being developed to include the specific requirements put forth by the Montana Department of Labor.

Lots of New CEUs – for a full list of the new CEU courses please see page 16.

Stay tuned to www.ESAweb.org/NTS for release dates.

Check.

Expertise verified.

Get a powerful advantage in the fast-moving market of security surveillance. With the Axis Certification Program, you get a worldwide confirmation of your competence and an assurance that you'll always be at the forefront of the industry.

Axis Certification Program – Master your knowledge.

security integration professionals have earned NTS certifications or completed courses since 1985, **by far the most trained by any industry organization** in the last 25 years.

Why Earn ESA/NTS Certifications?

Certifications provide noticeable acknowledgment of your core skills and knowledge — they validate your abilities to customers, supervisors, peers, and potential employers.

Not all certifications are equal. To distinguish yourself from your competitors, you need a certification that encourages professional growth and is recognized by the industry as the standard.

MAINTAINING CERTIFICATIONS

All ESA/NTS certifications are valid for a period of 24 months following the completion of a course of study. Certification is maintained through attendance at industry-related continuing education activities.

Maintaining ESA/NTS certifications requires certificate holders to earn 24 continuing education units/hours (CEUs) — the equivalent of 24 classroom hours — each renewal cycle.

Continuing Education

It is the responsibility of each certification holder to maintain records documenting qualified continuing education credits, report their credits on the ESA/NTS Certification Renewal Form, and submit the form and the applicable processing fee to ESA/NTS at the time of renewal.

Now renewing your NTS Certification(s) is more convenient. You can submit your renewal and upload any required documentation online. CEUs must

Lapsed Certifications

Persons who do not maintain their certification lose the privilege of using the designation. A certification is considered lapsed once the expiry date has passed. Lapsed certifications may be renewed as follows:

If certification was lapsed for less than 24 months, individuals will be required to submit 24 CEUs (or 24 classroom hours), pay the late fee plus the renewal fee for the lapsed renewal cycle.

be taken within the 24-month period from renewal date to renewal expiration date and cannot carry over to subsequent years.

Qualifying Activities

Programs covering the electronic life safety and security industry are eligible for ESA/NTS CEUs. The following activities may qualify:

ESA/NTS courses

Training Sessions, Educational Workshops or Seminars

College/University/Trade School courses

Industry Related Expos

Online/Distance Learning courses

Job Safety Training

ESA/NTS Course and Program Development

Active Committee Task Force Service

Electronic Life Safety and Security Industry Certifications

MONEY SAVING BUNDLES

SAVE 10-15%

When you purchase a certification bundle you will automatically be registered in all of the courses included in the bundle.

We'll keep you on track and ensure you don't miss a step to completing your CEUs or earning your certification!

Certification Bundles*

We have a bundle for each Certification ESA offers, that includes the registration and proctored exam for each of the courses included in the bundle. These Member-only certification bundles include:

Certified Alarm Technician (CAT) Level II – 3 courses and proctored exams for \$810 **save \$90**

Certified Fire Alarm Technician Level II (CFAT) – 3 courses and proctored exams for \$790 **save \$80**

Certified System Integrator (CSI)
- 4 courses and proctored exams for \$1080 **save \$120**

Certified Security System Integrator (CSSI) – 5 courses and proctored exams for \$1138 **save \$128**

Certified Fire Alarm Designer (CFAD)
– 4 courses and proctored exams for \$1150 **save \$125**

CEU Bundles*

To help you keep up with your state CEU needs or your certification renewals, we have put together the following CEU bundles that take the work out of picking and registering for CEU courses. Each bundle is compiled of a set of courses that when completed, will earn you a specific number of hours.

CHOOSE YOUR BUNDLE

This course is so essential that dozens of states, local licensing authorities and regulators insist on it as a prerequisite for performing security integration work.

This 22-hour foundational course, followed by an exam, provides students with an understanding of the industry and their role within it and provides the essential knowledge and skills for all forms of electronic security: intrusion detection, fire detection, video surveillance and access control.

Students will receive hands on practice building simple electrical circuits and designing system layouts, so they can see how their acquired knowledge is realistically applied to their field.

Certified Alarm Technician Level I will provide individuals with the knowledge and skills to:

Plan for and initiate a successful installation, while being able to tailor it to commercial or residential applications

Act responsibly and safely while on the job

Communicate effectively with customers and others in the industry

Understand the importance of codes and standards and how to locate and apply them

Define basic installation procedures and compare the underlying technology behind the various security system tools and equipment

A building block for more advanced and specialized training that can lead to enhanced profits and increased compensation for the student/credential holder

 Up to 24 CEUs

Who Should Attend?

Technicians, service personnel, installation personnel, sales staff and business owners

Take your intrusion system skillset to the next level

This 14-hour course, followed by an exam, is an advanced look at the design and installation of intrusion systems. Students learn how to select and install proper equipment in a variety of intrusion system applications.

The course provides basic electronics instruction and how it pertains to system design, component selection and troubleshooting, as well as information on system testing, commissioning and project management.

Advanced Intrusion Systems will provide individuals with the knowledge and skills to:

Select and apply sensors, control panels and communication devices to provide effective intrusion detection

Take technical knowledge and skills in intrusion detection to the next level, qualifying students for valuable advanced credentials

 Up to 16 CEUs

Who Should Attend?

Technical staff (installation, service, and maintenance), sales personnel, business owners, law enforcement, fire service, code officials, anyone seeking an advanced understanding of intrusion systems

INTRUSION

SERVICE

Managing Risk and Protecting YOUR Business

Electronic security and life safety installation and monitoring companies face significant risk each day: injury to workers, fleet accidents, property damage and lawsuits can all impact day-to-day operations and bottom lines.

Security America offers industry expertise, keeping companies like yours protected, with A-rated coverage on:

General liability
Errors and omissions
Umbrella/excess

Commercial auto/fleet
Workers compensation
Cyber liability

Master theory, design and practical application of electronic access control systems

This 14-hour course, followed by an exam provides the training needed to successfully design and install an electronic access control system. It teaches the theory and practical application of locks, door hardware and electronic access control systems. The course culminates in a system design exercise based on a customer's specifications and building plan.

Electronic Access Control will provide individuals with the knowledge and skills to:

Understand the concepts behind electronic access control systems including equipment and techniques

Create a hands-on access control system design based on customer specifications and building plans

Who Should Attend?

Technical staff, sales personnel and business owners

ACCESS

TROUBLESHOOTING, SERVICE AND MAINTENANCE (TSM)

CLASSROOM AND ONLINE

Master how to troubleshoot, service and repair intrusion, fire, video and access control systems

This 14-hour course, followed by an exam focuses on the maintenance aspects of today's electronic security systems. It offers dealers and integrators an additional revenue stream and the potential for significant profits through these additional services.

The course serves individuals seeking to expand their knowledge on servicing, repairing and maintaining intrusion, fire, video surveillance and access control systems. It also covers the fundamentals of troubleshooting as well as specific troubleshooting procedures for today's systems.

The course includes reference material from NFPA 70, NFPA 72, and NFPA 730/731 covering the proper test and inspection procedures of these systems.

Troubleshooting, Service and Maintenance will provide individuals with the knowledge and skills to:

Increase the efficiency and effectiveness of service professionals by teaching essential concepts and methods

Open up new revenue streams for dealers and integrators

Make existing service and maintenance operations more productive and profitable

Troubleshooting Analog and Digital

Build solid technical knowledge in this fast-growing category

This 14-hour course, followed by an exam gives students the knowledge to successfully design and install a basic video surveillance system.

It focuses on methods and equipment including digital cameras, coaxial cabling, user interfaces, networking considerations, and video storage options.

Video System Technologies will provide individuals with the knowledge and skills to:

Design and install a basic video surveillance system

Understand the functions and applications of all major equipment types

Students will complete two extensive practical exercises culminating in an actual system design per a customer's specification and building plans

Up to 16 CEUs

Who Should Attend?

Technical staff, sales personnel and business owners

Plan Preparation Project

Master the design and installation plan of code compliant fire systems based on field conditions and project requirements

This 14-hour course, followed by an exam provides specific training on developing an installation plan based on field conditions and project requirements.

Whether preparing plans for a factory's monitored suppression system or designing a voice evacuation system for a movie theater complex, plans should be developed by persons experienced in the proper design, application, installation and testing of commercial fire alarm systems.

The course focuses on providing a more advanced level of knowledge gleaned from national codes regarding proper detector selection, required coverage for specific building occupancies, as well as documentation and plan submittal requirements.

Professional Fire Alarm Design will provide individuals with the knowledge and skills to:

Design a system affording the best life safety for a building's occupants based on codes and standards

Prepare plan submittal documents required by regulatory groups

Prerequisite: Those wishing to attend this course must have taken the Fire Alarm Installation Methods (FAIM) course. The Life Safety Code (LSC) course is also strongly recommended.

 Up to 16 CEUs

Who Should Attend?

Technical staff, sales personnel, business owners, fire service and code officials

FIRE

WELCOME TO THE
ESA NATIONAL TRAINING SCHOOL

INVEST IN YOURSELF

ESA's National Training School (NTS) is the leading provider of classroom and online courses, as well as certifications, for the evolving electronic security and life safety industry.

Because NTS courses are developed by industry professionals with in-depth experience in security integration, courses focus on practical skills and knowledge relevant to the required jobs and tasks in a subject area. As the security integration channel and code specifics evolve, so do our courses, reflecting the latest trends and updates. Students learn what they need to know in today's market.

Not All Training is Created Equal.

Isn't it time you trust the most widely recognized and accepted training provider in the electronic security industry with educating your staff?

Code comparisons

 **Up to 8 CEUs**

Gain critical knowledge of common occupancy class code requirements

This 7-hour course, followed by an exam teaches students the practical application of the NFPA 101 Life Safety Code. Instruction focuses on the fire alarm and access control requirements for most common occupancy classes that students will encounter on a daily basis, offering insights on common errors and areas of confusion.

Special attention is paid to the similarities and differences between the International Building Code (IBC) and NFPA 101 Life Safety Code.

Life Safety Code will provide individuals with the knowledge and skills to:

Design, install and maintain fire alarm and electronic access control systems that comply with NFPA 101 Life Safety Code

Identifying niche business opportunities based on the most common occupancy classes, creating new revenue-generating services and opportunities

Understanding the similarities and differences between the IBC, IFC and NFPA 101 Life Safety Code making it easier to understand what requirements apply based on the adopted code in your local jurisdictions

Who Should Attend?

Fire alarm systems

Egress control

Assembly occupancies

Educational occupancies

Daycare occupancies

Residential occupancies

Institutional occupancies

Other occupancies

Life Safety Code/
International Building
Code comparisons

 Up to 8 CEUs

Gain proficiency in installation requirements for various occupancy classes

This 7-hour course, followed by an exam is based on the International Building Code (IBC) and the International Fire Code (IFC). Students learn the practical application of IBC, focusing on the fire alarm and access control requirements for the most common occupancy classes that will be encountered on a daily basis and offering insights on common errors and areas of confusion.

Special attention is paid to the similarities and differences between the IBC and NFPA 101 Life Safety Code.

International Building Code will provide individuals with the knowledge and skills to:

Design, install and maintain fire alarm and electronic access control systems that comply with both IBC and IFC

Identify niche business opportunities based on the most common occupancy classes, creating new revenue-generating services and opportunities

Understand the similarities and differences between the IBC, IFC and NFPA 101 Life Safety Code making it easier to understand what requirements apply based on the adopted code in your local jurisdictions

Who Should Attend?

Individuals seeking fire certification, technical staff, sales personnel, business owners, fire service and code officials

FIRE

SECURITY SALES ESSENTIALS (SSE)

CLASSROOM

Gain useful knowledge to effectively and ethically sell electronic security systems

This 7 or 14-hour course, followed by an exam is a comprehensive, modular program covering the complete sales cycle.

Day 1 will explore core sales subjects within residential sales. Day 2 will focus on commercial sales in each of the industry segments: intrusion, access control, fire and video.

Security Sales Essentials will provide individuals with the knowledge and skills to:

Know the complete sales cycle

Offer new or veteran sales personnel with the insights necessary to convert sales prospects into customers

Know the similarities and differences in the sales process for residential and commercial sales, including insights into the unique issues relevant to fire alarm, access control and video surveillance systems

Have the tools and tips necessary to perform at a highly successful sales level

SUBJECT AREAS

Overview of the security sales cycle

Prospecting

Problem identification

Solution – presentation

Closing – the transaction stage

Handling objections

Strategies for selling in the digital age

How to cross sell

Consultative selling

Customer advocacy

Managing customer relationships

 Up to 16 CEUs

SALES

Who Should Attend?

Sales personnel, customer service personnel, technical staff and business owners

UNDERSTANDING ELECTRONIC SECURITY SYSTEMS (UESS)

CLASSROOM AND ONLINE

SUBJECT AREAS

Fire alarm system devices

Security devices

Control panels

Communications

Managing alarms

Needs assessment

 Up to 8 CEUs

Gain an understanding of the electronic life safety and security industry

This 7-hour course, followed by an exam teaches the basic elements of the electronic life safety and security industry including sensors, control panels and communications with an emphasis on the need for an adequate site survey.

It stresses the importance of false alarm prevention while exploring the interaction between electronic life safety and security professionals, law enforcement and fire prevention officials.

Understanding Electronic Security Systems will provide individuals with the knowledge and skills to:

Know the basics of the electronic life safety and security industry

Be aware of the importance of false alarm prevention

Who Should Attend?

Non-technical staff, business owners, law enforcement, fire service, code officials and anyone seeking an overview of the electronic life safety and security industry

Team training can mean **BIG SAVINGS.**

Private Classes

Member companies who wish to have an NTS course delivered solely for their employees can request a private class. These offerings are tailor-made to fit your dates, times and locations. Not only do we bring the NTS-certified instructor to you, but we bring the savings, too!

Train 16 students and pay \$365 per student
a savings of more than \$480 for the Level I course

Train 31 students and pay \$345 per student
a savings of more than \$1,550 for the Level I course

Train 51 students and pay \$325 per student
a savings of more than \$3,570 for the Level I course

To learn more about NTS private classes, please contact your local ESA Chartered Chapter Association (CCA) or ESA/NTS. Note: Savings listed above are reflective of ESA/NTS prices and may vary from the CCA.

Power User Discount Packages for NTS Core Courses

ESA's most popular courses are available online for self-paced, on-demand learning. ESA member companies that plan to use online training in volume can take advantage of substantial discounts on ESA's already affordable rates. If you plan to train 16 or more employees using online courses, contact us so we can help you save!

CEU Bundled Packages

For your employees that need CEUs to renew their license or maintain their certification, we offer CEU Hourly Bundled Packages. With a CEU Hourly Bundle Package you can purchase CEU hours in bulk; savings begin by purchasing a package of 200 or more hours.
