The Ultimate Smart Security System

Bring security, life-safety and smart control together in one simple platform.

- Innovative modular design
- Built-in Amazon Alexa
- Operate, program, upgrade and maintain locally or remotely
- Easy to learn, quick to install, simple to maintain

All this together to help dealers —

WIN more customers, KEEP them longer and DRIVE profits.

# TAAS

## Training as a Service

Leverage ESA's buildable curriculum covering technical training, safety skills and topical industry trends. TaaS provides everything you need in one place, from communication and safety skills training to industry knowledge that meets state licensing requirements — and all levels in between.

Managers will receive administrative access to their employee's training records so that they can monitor progress and encourage completion.

**EXCLUSIVELY FOR  
ESA MEMBERS**

## Online Assessment Exams

Are you on the look out for top-tier technical talent to drive your company's success? ESA's comprehensive technical assessment exams are designed to help you identify the brightest minds in your candidate pool. Pinpoint the best technical talent in areas, like: intrusion, fire, access control and video installation and servicing.

Streamline your hiring process with ESA's online assessments exams, providing quick insights into candidates' capabilities and reducing time-to-hire.

# NEW OR REVISED COURSES IN 2024

## VST

### Video System Technologies **NEW**

The Video System Technologies (VST) course will provide you with the knowledge you need to successfully design and install a basic Video Surveillance system. The primary focus of this course is to provide you with knowledge on current methods and equipment, such as digital cameras, cabling options, networking, storage solutions as well as insight into progressive and emerging technologies.

**16 HOURS**

## CEU

### Life Safety and Building Codes **NEW**

This course provides students with information relevant to technicians assigned to design either portions of, or the entire life safety system. This course provides code similarities and differences between the LSC and IBC.

**10 HOURS**

## CEU

### Installation Basics for Residential Fire: **NEW**

This online course provides students with the basics for installing a Residential Fire System, which includes Control Panels, Initiating Devices, Notification Appliances, Wiring and Circuitry, and Power Requirements.

**3 HOURS**

## 2024 Revisions

Certified Alarm Technician Level I: Updating the Level I Course to expand the information and focus on wireless technology and design.

Troubleshooting, Service, and Maintenance. Updating the course to ensure it focuses on the latest technology and to incorporate more networking and wireless troubleshooting.

**For a full listing of CEU courses, see [page 30](#)**

# MAKE ROOM!

NOW... MORE CHANNELS OF POWER DISTRIBUTION – by **ALTRONIX**

Introducing **ACMS12(CB)** 12-Output Access Power Controllers, and **PDS16(CB)** 16-Output Power Distribution Modules.

These new sub-assemblies further increase access control capacity when integrated with Altronix Trove or any wall/rack mount application - reducing overall equipment and installation costs.

## KEY FEATURES:

- ▶ Power and control more devices in less space
- ▶ Dual voltage provides selectable 12 or 24VDC from any output
- ▶ Bi-color voltage LEDs for visual identification
- ▶ Stackable with VR6, Tango1B, and more...
- ▶ Multiple boards may be daisy chained for system expansion
- ▶ Backed by a Lifetime Warranty

For more information email: [info@altronix.com](mailto:info@altronix.com)

YOUR LEADER IN POWER & DATA TRANSMISSION SOLUTIONS.

# GROW

## Planning & Registering For Training

**ESA's National Training School (NTS) is the leading provider of classroom and online courses, as well as certifications, for the evolving electronic security and life safety industry.**

The NTS course zone will help you find everything from current courses and certification requirements to exam information — to ensure you have access to quality training. The search-by-state function will allow you to view the state-required courses for licensure and/or continuing education, providing NTS approved courses if applicable.

**[COURSES.ESAWEB.ORG](https://COURSES.ESAWEB.ORG)**

**CEU**
 **NTS COURSE AND/OR CERTIFICATION**
 **BOTH**

\*ESA is an approved alternative examination entity. Check with your local jurisdiction to see if training can be used for licensing.

# FIRE

## Recognized Fire Training

**ESA's Fire Alarm Certifications are now recognized in 12 jurisdictions as alternatives to NICET.**

No one can argue that the Fire Certifications offered by the National Institute for Certification in Engineering Technologies are widely recognized by AHJs throughout the country; however, ESA's fire certifications (NICET) are growing in popularity due to more streamlined access to training, testing, and credentialing.

**Today, 12 jurisdictions have approved ESA Fire Certifications as alternatives to NICET.**

ESA offers a structured training, testing and credentialing program that can be presented as live instructor-led classroom training or in an online distance learning format with proctored exams administered by local third-party testing centers.

**Testing and verification of experience and issuance of an applicant's fire alarm certification is processed within weeks - not months - upon course completion, passing the exam(s) and receipt of the New Certification Request Form.**

ESA's Certified Fire Alarm Technician (CFAT) Level II Fire certification provides an alternative equivalency to the NICET II requirement for industry professionals that perform installation, inspection, testing, maintenance and programming of fire alarm systems. The Certified Fire Alarm Designer (CFAD Level III certification) provides an alternative to the NICET III fire alarm requirement for establishing the competency of industry professionals seeking design and/or design review compliance.

Recognition is slated to grow, with current proposals for approval of ESA's fire alarm certifications as an alternative to NICET active in several additional states.

To discover what ESA Certifications are approved in your area, visit **[ESAWEB.ORG/MYSTATE](https://www.esaweb.org/mystate)**

# STATE SPECIFIC COURSES

## Custom Educational Solutions

Texas 18 hour Alarm Level I

8 hour CEU Bundle for Installers

Certified Alarm Technician Level I meets Level I training requirement for installers

Texas Residential Fire Alarm/Certified Residential Fire Alarm Inspector Certification (TX-CRFAI) is approved for the RAL license

Certified Fire Alarm Technician (CFAT) Level II is approved for the FAL license

The CRFAI plus CFAT is approved for the RAS license

Certified Fire Alarm Designer Level III is approved for the APS license

(DPS/PSB Training School License # Y00111 & TX SFMO License # FAS-1854887)

The Electronic Security Association is an approved Examination Entity for Alarm licensure by the Oklahoma Department of Labor. The following exams are approved:

OK Certified Alarm Technician Level I exam meets the requirements for the OK Residential Burglar/Residential Fire Technician

Fire Alarm Installation Methods exam meet the requirements for the OK Commercial Fire Technician/Salesperson exam

OK Electronic Access Control exam meets the requirements for the OK Electronic Access Control Technician

OK Video Systems Technologies exam meets the requirements for the OK Closed Circuit Television (CCTV) Technician

**We have developed the following custom solutions to help those residing in states that have very specific and targeted training requirements.**

*Florida*

BASA FASA 6 hour Renewal course  
(BASAce 0801751 FASAce 0801752)

BASA FASA 14 hour Initial course  
(FASAeb 0801688 & BASAeb 0801689) -  
Available in Spanish!

7 hour Alarm Contractor Renewal course

Certified Alarm Technician Level I course  
approved for BASA FASA (FASAeb  
0801518 & BASAeb 0801517) – perfect for  
those working in the northern sector of  
the state who may work in OR outside  
of Florida

Service

## THE INDUSTRY'S ONLY FULLY CUSTOMIZABLE TRAINING PROGRAM TO ADDRESS YOUR COMPANY'S UNIQUE NEEDS.

**Training as a Service (TaaS)** is the first program of its kind for the electronic security and life safety industry. This customizable training solution allows employers to fast-track new hires and current employees with in-house training.

Leverage this buildable curriculum covering technical training, safety skills and topical industry trends. TaaS provides everything you need in one place, from communication and safety skills training to industry knowledge that meets state licensing requirements — and all levels in between.

All courses are offered online, with reporting features that allow supervisors to track the progress of employees.

## BENEFITS

**Attract and retain employees**

**Customizable to your company's unique needs**

**Convenient - all courses are offered online**

**Reporting that helps you track students' progress**

**Recommended course schedule and reminders**

**Cost effective**

## TIER 1

### ESA Systems Technician

CORE SKILLS | 0 – 6 MONTHS EMPLOYMENT  
69 HOURS OF TRAINING INCLUDING:

#### 43 HOURS OF REQUIRED COURSEWORK:

- OSHA 10 Hour
- Basics of Customer Service
- Certified Alarm Technician Level I
- Communication Strategies
- Workforce Skills

PLUS Choose Up to 26 More Hours of Elective Coursework to Customize Your Package

UPON COMPLETION OF TIER 1, STUDENTS WILL RECEIVE:  
ESA Systems Technician Completion Certificate, Level I Certified Alarm Technician Certification, OSHA 10 Hour Certification

## TIER 2

### ESA Systems Specialist

INTERMEDIATE SKILLS | 6 – 18 MONTHS EMPLOYMENT

80 HOURS OF TRAINING INCLUDING:

#### REQUIRED COURSEWORK:

Troubleshooting, Service and Maintenance

#### CHOOSE TWO OF THE FOLLOWING:

- Advanced Intrusions Systems
- Fire Alarm Installation Methods
- Electronic Access Control
- Video System Technologies

PLUS Choose Up to 32 More Hours of Elective Coursework to Customize Your Package

UPON COMPLETION OF TIER 2, STUDENTS WILL RECEIVE:  
ESA Systems Specialist Completion Certificate, Troubleshooting, Service and Maintenance Course Completion Certificate, Additional Course Completion Certificates

### ESA Security Sales Associate

CORE SKILLS | 0-24 MONTHS EMPLOYMENT

31 HOURS OF TRAINING INCLUDING:

- Understanding Electronic Security Systems
- Selling Integrated Systems
- Selling Commercial Intrusion/Fire/Access/Video
- Video Systems — Technical Considerations for Sales Agents
- Access Control - Technical Considerations for Sales Agents

UPON COMPLETION OF SALES TIER, STUDENTS WILL RECEIVE:  
ESA Security Sales Agent Completion Certificate, Understanding Electronic Security Systems Completion Certificate, Additional Course Completion Certificates

## Why Earn ESA/NTS Certifications?

Certifications provide noticeable acknowledgment of your core skills and knowledge — they validate your abilities to customers, supervisors, peers, and potential employers.

**Not all certifications are equal.** To distinguish yourself from your competitors, you need a certification that encourages professional growth and is recognized by the industry as the standard.

# CERTIFIED

# Maintaining

---

**Renewing your ESA Certifications is now easier than ever!**

## **Qualifying Activities**

Programs covering the electronic life safety and security industry are eligible for ESA CEUs.

---

### **The following activities may qualify:**

- ESX Education Sessions
- ESA National Training School courses
- College/University/Trade School courses
- Training Sessions, Educational Workshops, or Seminars
- Industry Related Expos
- Online/distance learning courses
- Job Safety Training
- Work Experience Verification
- Teaching and ESA Course Development
- Active Committee/Task Force Service
- Electronic Life Safety and Security Industry Certifications

# CERTIFICATIONS

# Certifications

All ESA Certifications are valid for a period of 24 months following the completion of a course of study. Certification is maintained through attendance at industry-related continuing education activities. Maintaining certifications requires certificate holders to earn 24 continuing education units (CEU) hours — the equivalent of 24 classroom hours each renewal cycle.

All certification holders are subject to a random audit. If you are audited, you will receive notification from ESA within 60 days of receipt of renewal to send all requested CEU documentation for review.

*It is the responsibility of each certification holder to maintain records documenting qualified continuing education credits.*

## Lapsed Certifications

Persons who do not maintain their certification lose the privilege of using this designation. A certification is considered lapsed once the expiry date has passed. Lapsed certifications may be renewed as follows:

- **If certification was lapsed for less than 24 months**, individuals will be required to submit 24 CEUs (or 24 classroom hours) and pay a late fee in addition to the standard renewal fee for the lapsed certification.
- **If certification has lapsed for more than 24 months**, the certification may not be renewed until the primary course and exam leading to certification are retaken.

Those wishing to attain another ESA certification must have their current certification in good standing.

Coverage for electronic security and life safety installation and monitoring businesses.

## Certified Alarm Technician Level I

**This course is so essential that dozens of states, local licensing authorities and regulators approve it as a prerequisite for performing security integration work.**

This 22-hour foundational course, followed by an exam, provides students with an understanding of the industry and their role within it and provides the essential knowledge and skills for all forms of electronic security: intrusion detection, fire detection, video surveillance and access control.

Students will receive hands on practice building simple electrical circuits and designing system layouts, so they can see how their acquired knowledge is realistically applied to their field.

### Subject Areas

Fire Alarm System Introduction	Communication & Reporting
Codes and Standards	Testing, Inspecting, and Maintenance
Fire Alarm System Fundamentals	Household Systems*
Operation of Initiating Devices and IDC Circuits	Fire Alarm System Documentation
Initiating Devices - Spacing and Location	NEC Fire Alarm Wiring Methods
Emergency Control Functions	Carbon Monoxide Detection
Notification Appliances and Circuits	Emerging Technologies

AVAILABLE IN SPANISH

### Certified Alarm Technician Level I will provide individuals with the knowledge and skills to:

**Plan for and initiate a successful installation, while being able to tailor it to commercial or residential applications**

**Act responsibly and safely while on the job**

**Communicate effectively with customers and others in the industry**

**Understand the importance of codes and standards and how to locate and apply them**

**Define basic installation procedures and compare the underlying technology behind the various security system tools and equipment**

**Continue with more advanced and specialized training that can lead to enhanced profits and increased compensation for the student/credential holder**

## Electronic Access Control

**Master theory, design and practical application of electronic access control systems**

This 14-hour course, followed by an exam, provides the training needed to successfully design and install an electronic access control system. It teaches the theory and practical application of locks, door hardware and electronic access control systems. The course culminates in a system design exercise based on a customer's specifications and building plan.

**Electronic Access Control will provide individuals with the knowledge and skills to:**

**Understand the concepts behind electronic access control systems, including equipment and techniques**

**Create a hands-on access control system design based on customer specifications and building plans**

### Subject Areas

Introduction

Overview

Building Codes

Locksmithing

Locks and Barriers

Entry Devices

Exit Devices

Powering Components

Controllers and Processors

Wiring Methods

System Design

Common Errors and Solutions

## Advanced Intrusion Systems

**Take your intrusion system skillset to the next level**

This 14-hour course, followed by an exam, is an advanced look at the design and installation of intrusion systems. Students learn how to select and install proper equipment in a variety of intrusion system applications.

The course provides basic electronics instruction and how it pertains to system design, component selection and troubleshooting, as well as information on system testing, commissioning and project management.

**Advanced Intrusion Systems will provide individuals with the knowledge and skills to:**

**Select and apply sensors, control panels and communication devices to provide effective intrusion detection**

**Take technical knowledge and skills in intrusion detection to the next level, qualifying students for valuable advanced credentials**

### Subject Areas

Introduction	Advanced System and Devices
Review	Practical Sensor Applications
Practical Application of Electronics	Communications
Practical Application of Controls	Testing and Commissioning
System Power	Overview of Project Management Concepts
Networking

## Troubleshooting, Service & Maintenance

### Master how to troubleshoot, service and repair intrusion, fire, video and access control systems

This 14-hour course, followed by an exam, focuses on the maintenance aspects of today's electronic security systems. It offers dealers and integrators an additional revenue stream and the potential for significant profits through these additional services.

The course serves individuals seeking to expand their knowledge on servicing, repairing and maintaining intrusion, fire, video surveillance and access control systems. It also covers the fundamentals of troubleshooting as well as specific troubleshooting procedures for today's systems.

The course includes reference material from NFPA 70, NFPA 72, and NFPA 730/731 covering the proper test and inspection procedures of these systems.

**Troubleshooting, Service and Maintenance will provide individuals with the knowledge and skills to:**

**Increase the efficiency and effectiveness of service professionals by teaching essential concepts and methods**

**Open up new revenue streams for dealers and integrators**

**Make existing service and maintenance operations more productive and profitable**

### Subject Areas

Preparation

Test Equipment

Basic Circuit Troubleshooting

Panels and Power Supplies

Intrusion and Fire Alarm Devices

Communication and Notification

CCTV

Electronic Access Control

Maintenance and Inspections

## Video System Technologies

**Build solid technical knowledge in this fast-growing category**

This 14-hour course, followed by a two-hour examination, allows students to acquire the knowledge needed to successfully design and install a basic video surveillance system. The course includes two extensive exercises that culminate in an actual system design based on a given customer's specifications and building plans.

**Video System Technologies will provide individuals with the knowledge and skills to:**

**Design and install a basic video surveillance system**

**Understand the functions and applications of all major equipment types**

**Students will complete two extensive practical exercises culminating in an actual system design per a customer's specification and building plans**

### Subject Areas

Camera and Lens Considerations

Transmission Media

Network Basics

Monitors

Power

Auxiliary Equipment

System Design

Recording

Commissioning

## Residential Fire Alarm

**Be proficient in the design and installation of residential fire alarm systems**

This 7-hour course, followed by an exam, provides technical and sales staff with experience designing, selling, installing and maintaining residential fire alarm systems.

**WE ALSO OFFER A SPECIAL VERSION MODIFIED TO MEET THE TEXAS SFMO REQUIREMENTS FOR THE FAL LICENSE.**

**Residential Fire Alarm will provide individuals with the knowledge and skills to:**

**Design, install, and maintain residential fire alarm systems that comply with NFPA 72, NFPA 101, NFPA 70, and International Residential Code (IRC)**

**Expand their business services to include residential fire alarm systems**

**Offer current and prospective customers the code-required system test and inspection services included in today's fire alarm codes**

### Subject Areas

Codes and Standards

Control Panels

Power Requirements

Notification Appliances

Initiating Devices

Communication Methods

Wiring

Testing and Cleaning

Documentation

## Fire Alarm Installation Methods

**Gain critical knowledge to install, service, and maintain code-compliant fire alarm systems**

This 14-hour course, followed by an exam, provides broad training in proper installation and service requirements for commercial and household fire alarm systems based on NFPA and ICC codes.

NFPA requires fire inspection and testing personnel to be knowledgeable and trained, and service personnel to be qualified and experienced. Students will learn the information needed for professionals to become familiar with fire alarm system requirements necessary to gain certification and prove competence.

**Fire Alarm Installation Methods will provide individuals with the knowledge and skills to:**

**Install and maintain fire alarm systems that comply with NFPA 72, ICC, and NFPA 70**

**Properly service and maintain fire alarm systems**

### Subject Areas

Fire Alarm System Introduction

Codes and Standards

Fire System Fundamentals

Initiating Device Operation

Initiating Device Spacing and Location

Emergency Control Functions

Notification Appliances and Circuits

Communication and Reporting

Testing and Inspecting

Household Systems\*

## Professional Fire Alarm Design

### Master the design and installation plan of code compliant fire systems based on field conditions and project requirements

This fourteen-hour course, followed by a 2-hour examination, provides specific training for attendees to develop an installation plan based on field conditions and project requirements. The course will provide information needed to prepare commercial fire alarm system plans and submittal documents. Plans should be developed by persons experienced in the proper design, application, installation, and testing of commercial fire alarm systems. Therefore, the primary focus of this course is to provide a more advanced level of knowledge gleaned from national codes regarding proper detector selection, required coverage for specific building occupancies, as well as documentation and plan submittal requirements.

Whether preparing plans for a factory's monitored suppression system with seemingly minimal requirements or designing a voice evacuation system for a movie theater complex, attention to detail, adherence to requisite code requirements, as well as a comprehensive inclusion of all required documentation, will be 'job one.' Doing so will provide a system design which, when properly installed and maintained, will afford the best life safety for the occupants of that building. Well prepared plans, including the proper forms and paperwork, will set the ball in motion for a system that can be operated and maintained for years to come.

#### Subject Areas

The Industry	Design Project - Mixed Occupancy
Fire Alarm Installation Review	Choosing Supervisory Components
Overview of Project Management Concepts	Choosing Notification Appliances
Determine Detection Criteria	Fire System Programming
Additional System Design Requirements	Submittal Package Preparation
Owner's Design Criteria	Other Important Documentation
Defining Project Scope	Plan Preparation Project
Choosing Initiating Devices	

#### Professional Fire Alarm Design will provide individuals with the knowledge and skills to:

Design a system affording the best life safety for a building's occupants based on codes and standards

Prepare plan submittal documents required by regulatory groups

**Prerequisite:** Those wishing to attend this course must have taken the Fire Alarm Installation Methods (FAIM) course. Taking either the International Building Code (IBC) or the Life Safety Code (LSC) course is also strongly recommended.

# LSC

## Life Safety Code

**Gain critical knowledge of common occupancy class code requirements**

This 7-hour course, followed by an exam, teaches students the practical application of the NFPA 101 Life Safety Code. Instruction focuses on the fire alarm and access control requirements for most common occupancy classes that students will encounter on a daily basis, offering insights on common errors and areas of confusion.

Special attention is paid to the similarities and differences between the International Building Code (IBC) and NFPA 101 Life Safety Code.

**Life Safety Code will provide individuals with the knowledge and skills to:**

**Design, install and maintain fire alarm and electronic access control systems that comply with NFPA 101 Life Safety Code**

**Identifying niche business opportunities based on the most common occupancy classes, creating new revenue-generating services and opportunities**

**Understanding the similarities and differences between the IBC, IFC and NFPA 101 Life Safety Code making it easier to understand what requirements apply based on the adopted code in your local jurisdictions**

### Subject Areas

## International Building Code

**Gain proficiency in installation requirements for various occupancy classes**

This 7-hour course, followed by an exam, is based on the International Building Code (IBC) and the International Fire Code (IFC). Students learn the practical application of IBC, focusing on the fire alarm and access control requirements for the most common occupancy classes that will be encountered on a daily basis and offering insights on common errors and areas of confusion.

Special attention is paid to the similarities and differences between the IBC and NFPA 101 Life Safety Code.

**International Building Code will provide individuals with the knowledge and skills to:**

**Design, install and maintain fire alarm and electronic access control systems that comply with both IBC and IFC**

**Identify niche business opportunities based on the most common occupancy classes, creating new revenue-generating services and opportunities**

**Understand the similarities and differences between the IBC, IFC and NFPA 101 Life Safety Code making it easier to understand what requirements apply based on the adopted code in your local jurisdictions**

## Security Sales Essentials

**Gain useful knowledge to effectively and ethically sell electronic security systems**

This 7 or 14-hour course, followed by an exam, is a comprehensive, modular program covering the complete sales cycle.

Day 1 will explore core sales subjects within residential sales. Day 2 will focus on commercial sales in each of the industry segments: intrusion, access control, fire and video.

**Security Sales Essentials will provide individuals with the knowledge and skills to:**

**Know the complete sales cycle**

**Offer new or veteran sales personnel with the insights necessary to convert sales prospects into customers**

**Know the similarities and differences in the sales process for residential and commercial sales, including insights into the unique issues relevant to fire alarm, access control and video surveillance systems**

**Have the tools and tips necessary to perform at a highly successful sales level**

### Subject Areas

Overview of the Security Sales Cycle

Prospecting

Approach

Identifying Needs

Presenting the Solution

Closing

Intro to Commercial Sales

Commercial Intrusion

Commercial Fire

Commercial Access Control

Commercial Video

Commercial Integrated Systems

## Understanding Electronic Security Systems

**Gain an understanding of the electronic life safety and security industry**

This 7-hour course, followed by an exam, teaches the basic elements of the electronic life safety and security industry including sensors, control panels and communications with an emphasis on the need for an adequate site survey.

It stresses the importance of false alarm prevention while exploring the interaction between electronic life safety and security professionals, law enforcement and fire prevention officials.

**Understanding Electronic Security Systems will provide individuals with the knowledge and skills to:**

**Know the basics of the electronic life safety and security industry**

**Be aware of the importance of false alarm prevention**

### Subject Areas
